“Full Service welding/ fabrication, and welding instruction”

FabTekTechnology is full service welding and fabricating business located in Richmond RI. We provide residential, commercial, and industrial welding, repair and fabrication services to all of RI and New England.

Some of our services include: *industrial, commercial machinery and heavy equipment repair, welding, and fabrication, power plant maintenance, machining, sandblasting, forge work, marine welding/fabricating, piping, pipefitting, grate work, cat walks, ornamental work, historical reproduction and technical instruction*".

We are also an **American Welding Society (AWS)** certified welding school, offering a Welding Level 1 entry program consisting of a 7 week program which includes SMAW stick, GTAW MIG,TIG, FCAW flux core, radiographic flame cutting, oxy acetylene cutting, plasma cutting, and air arcing, OSHA safety guidelines, blue print reading, metal identification, and additional instruction. We are also pleased to announce our new AWS Level 2 course for advanced welders which will include pipe welding. Students receive classroom instruction, AWS written testing along with hands on welding practice. Instructors teaching this program have many years of field experience, and assist students completing the program with job placement.

Students learn the basic properties of metals and gases used in welding, as well as practicing welding technique. They also learn how to properly set up equipment, and participate in field experience in order to gain expertise and confidence for future employment opportunities.

We participate in a program offered by the Department of Labor and Training (The RI Network) for students who are currently unemployed. The DLT provides 100% funding for the Level 1 7 week program. Other options for school entry include payment plans for the tuition that is spread out over a 4 week period. We offer open enrollment. In addition we assist with job placement. Many of our students now hold full time positions.

We encourage students to excel beyond the Level 1 curriculum depending upon their skill level and interests. Pipe welding is available through our new Level 2 course.

Welding is an exciting and diversified field with opportunity for work in a variety of areas, some of which may include travel, and exposure to industry. It also affords many opportunities to express creative and artistic talent.
