Introduction

Rhode Island Commuting Patterns

Based on data collected from the Census Bureau's 2009-2013 American Community Survey, *Rhode Island Commuting Patterns* provides journey-to-work statistics for Rhode Island cities and towns. Data is divided into two categories: Where Rhode Island Residents Work and Where Rhode Island Workers Live. Not surprisingly, most Rhode Island residents work in Providence (21.3%). Commuting patterns also supply information on resident outflow to neighboring states for employment. Of all Rhode Island communities, Westerly has the highest percentage (34.8%) of residents who commute to Connecticut for work, while Tiverton has the highest percentage (31.0%) of residents working in Massachusetts.

Rhode Island workers are most likely to live in Providence (14.1%), followed by Warwick (8.1%). There are 53,504 residents from other states who commute into Rhode Island for employment. Westerly attracts the greatest percentage (19.9%) of Connecticut residents into its town for work, while Tiverton draws 31.3 percent of its workforce from Massachusetts.

Rhode Island exports 73,583 residents to other states for work, while Rhode Island imports only 53,504 workers from other states or countries.

Definitions

Commute to work - Includes data on where people work, how they get to work, how long it takes to get from their home to their usual workplace, when they leave home to go to their usual workplace, and carpooling. Data are estimates of people 16 years old and over who were both employed and at work during the reference week (including people in the armed forces). *Source: US Census Bureau, 2009-2013 American Community Survey 5-Year Estimates*

Income of Families - In compiling statistics on family income, the incomes of all members 15 years old and over in each family are summed and treated as a single amount. Family households include a householder and one or more persons living in the same household who are related to the household by birth, marriage or adoption. All persons in the household who are related to the householder are regarded as members of his or her family. Not all households contain families since a household may comprise a group of unrelated individuals or one person living alone. *Source: US Census Bureau, 2011-2015 American Community Survey 5-Year Estimates*

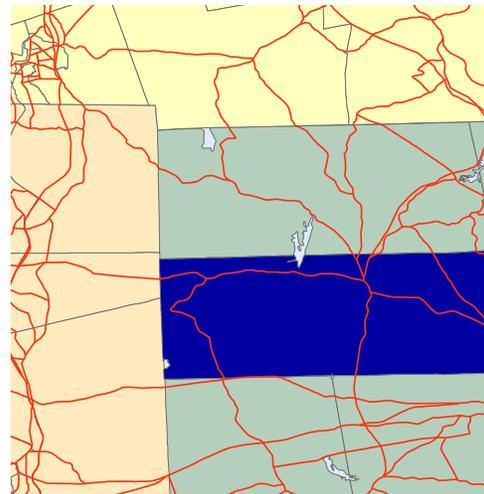

Income of Households - Includes the income of the householder and all other persons 15 years old and over in the household, whether related to the householder or not. Households include all the persons who occupy a housing unit – a house, an apartment, a mobile home, a group of rooms or a single room that is occupied as separate living quarters. Because many households consist of only one person, average household income is usually less than average family income. *Source: US Census Bureau, 2011-2015 American Community Survey 5-Year Estimates*

Unemployed - All civilians 16 years old and over were classified as unemployed if they were neither “at work” nor “with a job but not at work” during the reference week, were looking for work during the last four weeks, and were available to start a job. Also included as unemployed were civilians 16 years old and over who: did not work at all during the reference week, were on temporary layoff from a job, had been informed that they would be recalled to work within the next six months or had been given a date to return to work, and were available to return to work during the reference week, except for temporary illness. The unemployment rate is determined by dividing the number unemployed by the civilian labor force. *Source: US Bureau of Labor Statistics, 2015 Annual Average Unemployment Rate*

Educational Attainment - Level of education completed by all individuals aged 25 years and older. *Source: US Census Bureau, 2011-2015 American Community Survey 5-Year Estimates*
